Daniel D. Baldys

Jagiellonian University
Software Tester

"I had no IT background before joining FDM, but I have always liked tinkering with software, so I wanted to pursue a career in IT. I have now been working on multiple projects around mobile banking applications. I thoroughly enjoyed formulating business requirements, developing the code, testing it and reviewing the results with the team in order to create top-quality products. Working following the Scrum methodology means having several meetings a week, which keeps me constantly engaged."

Beata Król

AGH University of Science and Technology
Associate Exploratory QA

"My role involves working with banking mobile applications and I really love what I do. My team and I need to take in consideration every minor aspect of the application accessibility and be aware of all assistive technologies which may help people with disabilities. The FDM training allowed me to be in the position I am today, where I am constantly motivated to improve and develop myself."
